TOOLS

PeopleSoft integrates Vertex tax software. Vertex Inc., a maker of tax management software, announced a new integration of its O Series line of tax processing solutions with PeopleSoft Inc.'s Enterprise 8.4 and 8.8 systems. The integration, built by Berwyn, Pa.-based Vertex, will give customers of both companies a global view of all their transactional tax activities as well as a higher degree of automation and control in tax management processes. Vertex's O Series is a Web-based product that can be accessed through PeopleSoft systems at any location. The combined tools should also help companies with Sarbanes-Oxley Act requirements related to enhanced reporting by improving their visibility into tax process efforts across the enterprise.
