

Vertex® Indirect Tax Chain Flow Accelerator

Tax Decision Tool streamlines chain flow data mapping and improves VAT/GST accuracy.

For companies with complex cross-border supply chains, the Tax Decision Tool is an SAP Add-In that improves VAT determination accuracy and reduces reliance on IT support. This improves efficiency and scalability of tax processes.

Improve VAT Determination on Complex Transactions

The Chain Flow Accelerator Tax Decision Tool is an advanced VAT toolkit implemented in SAP ECC or SAP S/4HANA enabling tax professionals to connect all SAP data and documents in a flow for consistent VAT treatment across every leg of the transaction.

Visualize Mapping to Improve Accuracy and Reduce IT Reliance

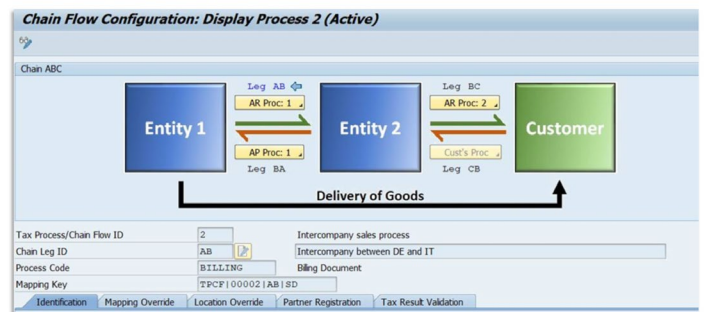

The tool provides detailed visualization of the data mapping in the SAP ERP. This improves accuracy, and allows tax professionals to conduct data mapping without significant IT support.

Streamline Migrations

Companies using ECC can improve VAT determination today by implementing the Tax Decision Tool, and streamline their migration from ECC to S/4HANA in the future since the VAT data mapping can be easily transferred during a technical migration. Implementing the tool today also streamlines the migration to a Vertex tax engine in the future.

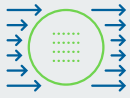

Leverage a Powerful Solution

The Tax Decision Tool provides robust VAT data mapping with powerful visualization for improved accuracy and reduced IT support needs.

A visualization tool improves accuracy and reduces IT support needed for data mapping.

Features

80 data fields and documents

Interpret, configure, and map 80 fields of chain flow data and documents in SAP.

Supports all VAT-relevant transactions in SAP

Map data from sales orders, purchase orders, billing, vendor invoices, finance postings, etc.

Robust mapping capability

Conduct generic and override mapping to improve VAT accuracy.

Visualization Tool

Leverage a visualization tool in SAP to reduce IT support needs and improve accuracy.

Supports SAP ECC and SAP S/4HANA

Implement the tool in SAP ECC today and easily transition to S/4HANA.

Simple implementation

Easy setup with minimal IT support needed. This accelerates time-to-value.
