VERTEX®

Vertex O Series Address Cleansing

Improve Tax Accuracy with Address Cleansing

It's a fact: improving the accuracy of your customer addresses reduces risk. The proprietary TaxGIS feature in Vertex calculation systems identifies the jurisdiction based on the transaction address. Improving the completeness and accuracy of each address will, in turn, improve the accuracy of tax jurisdiction assignment for enhanced tax accuracy.

Add Real-Time Address Cleansing to your Vertex Calculation System

Vertex customers can add real-time Address Cleansing to their Vertex tax calculation system. For every U.S. transaction, Address Cleansing will:

- Complete, correct, and cleanse the street address using USPS CASS data
- Assign the ZIP+4 code

After the real-time cleansing process, the cleansed address continues into the TaxGIS process for precise jurisdiction assignment and tax calculation.

Address Cleansing can be licensed at the same time as your Vertex calculation system or added at a later date. The capability can be added to Vertex O Series and Vertex Payroll Tax Q Series On-Demand.
