

Vertex O Series for Oil & Gas

Premium content and automated tax determination for the complex oil and gas industry

Vertex O Series for Oil & Gas automates complex tax calculation and improves compliance for upstream, midstream, and downstream segments in the U.S. oil & gas industry.

Improve tax accuracy for procurement and sales

Vertex offers the most flexible and robust tax solution to support both procurement and sales transactions in the U.S. oil and gas industry. Designed for upstream, midstream, and downstream businesses, the solution provides premium content and a powerful tax calculation engine for improved tax accuracy.

Automated tax content

Vertex research maintains continually updated sales and use tax content for the unique needs of the U.S. oil & gas industry – including 550+ oil and gas product categories (over and above thousands of standard categories). This means reduced effort to keep your tax calculations accurate for improved audit performance.

Improve situs determination

For oil rigs, wells, and other equipment without a traditional street address, add the Vertex O Series Latitude/Longitude Jurisdiction Locator to convert your lat/long coordinates to a Tax Area ID for improved tax accuracy. More accurate Tax Area ID means more accurate tax calculation regardless of location.

Improve agility and scalability

Vertex O Series enables oil & gas customers to simultaneously automate processes and improve tax accuracy. The tax function will become more agile to support changes in the energy market and entry into new markets/channels, while proactively reducing risk and lowering costs.

Benefits

Reduced internal processes

Reduced audit risk

Improved agility

Increased scalability
