

Address Cleansing for Oracle EBS for Payroll Tax

Address Cleansing for Payroll at a Glance

- Reduce audit exposure by ensuring address data is entered accurately
- Tight integration between Oracle EBS Payroll and Address Cleansing functionality
- Automated, seamless user experience with a simple configuration — no additional software required

Reduce Payroll Tax Audit Exposure with Address Cleansing

Pinpointing the tax jurisdiction for every employee on an organization's payroll can be a complicated ordeal — all it takes is one misplaced digit in a zipcode to introduce costly errors into your payroll tax processing. Fortunately, Address Cleansing for Payroll works seamlessly with Oracle EBS for automated, accurate payroll tax management.

Alleviate Payroll Pain Points with Address Cleansing.

Often, employers experience difficulty identifying a correct tax jurisdiction to assign to a new employee, or an employee who has changed addresses. A single zip code in a single town may represent several possible jurisdictions, or employees may enter their addresses incorrectly on onboarding paperwork — which can result in incorrect tax withholdings.

Until now, there has been no automatic way of dealing with these issues within EBS. Address Cleansing for Oracle EBS for Payroll Tax is a seamless, automated solution for addressing these pain points without having to leave Oracle. The result? **Accurate jurisdiction assignment and a streamlined user experience.**

Fully Automated Address Cleansing.

Previously, assigning GeoCodes to employee addresses within Oracle EBS Payroll was a manual task that didn't always return one result, or include all of the required information for accurate tax calculation. Any time a manual process is introduced into a system, the door opens for human error.

Seamless Integration. Reduced Risk of Error.

Vertex and Oracle have worked together to integrate the Vertex Address Cleansing solution seamlessly into Oracle EBS Payroll. Vertex Address Cleansing automatically resolves a street level address in Oracle EBS Payroll to a single Vertex GeoCode, a single Political Subdivision Code (PSD), and a Single School District Code. This ensures the address conforms to USPS standards with a full 9-digit zip code, and works within both the Employee Self Service Portal and the Professional address forms.

This means you can eliminate manual processes, automate jurisdictional assignment, and never have to leave Oracle to verify that all employee address data is accurate. Enjoy an improved user experience and reduce the risk of incorrectly calculating paychecks for your employees.

Vertex® Address Cleansing for Oracle EBS Payroll

No Additional Software. No Headaches. Just Simple Configuration.

Address Cleansing is easily activated within Oracle. Once a user is licensed to use the functionality, they simply configure how it behaves within EBS. There is no additional software to install, no customization of core functionality, and no need to engage in a costly development project.

About Vertex

Founded in 1978, Vertex Inc. is the leading provider of corporate tax software and services to automate, integrate, streamline or outsource tax processes for companies of all sizes, from small to medium-sized businesses to global multinationals.
